Features

BI-DIRECTIONAL DATA EXCHANGE: Enjoy the power of real-time data flow between Malbek and Oracle, ensuring instant updates on key contract and procurement details.

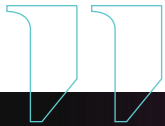

INTUITIVE ACTIONS: Seamlessly create, update, and cancel purchase orders, manage receipt line items, and review essential data within the Malbek contract record.

CONFIGURABILITY:: Tailor line item and receipt tables to match your organization's processes, with the flexibility to add or modify data fields as needed.

SIMPLIFIED DRAFTING & REQUESTS: Create and update line items while drafting contracts. Easily search and select vendor information during the request process.

STREAMLINE PAYMENTS & INVOICES: Review updated data such as PO status, number, invoice, and payment details in Malbek.

ROBUST ADMIN AND SECURITY: Easily setup that allows you to manage the Oracle integration and establish rules around security and process validation.

Flexible and fast CLM! Integration setup takes minutes and I can now map new fields when business needs change, without any help from IT. 99% of the application could be administered by a business admin, including integrations, forms, and workflows.

Master Data

Efficiently handle vendor and supplier master data through Amazon Simple Storage (S3) or your secure file transfer protocol (SFTP) locations.

- Line item and Receipt tables are customizable to add data fields, per your business process.
- JavaScript Object Notation (JSON) file format, specific to your configuration of the inbound and outbound data to SQS.
